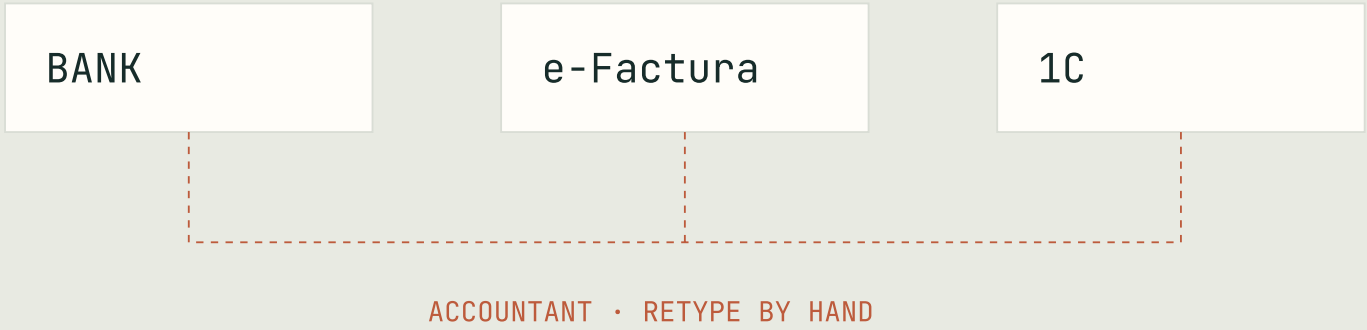
Kantora

Banking, e-Factura and 1C in one place.
For SMEs and accounting firms in Moldova.

Grecu Catalin · CTO Andrei Jizdan · CEO, Jizdan & Partner catalin.grecu20@gmail.com

02 / PROBLEM

The bridge between three systems is a person.



BANK

Money lives in MAIB.

FISCAL PORTAL

Invoices live in e-Factura.

LEDGER

Books live in 1C.

Accounting firms export an invoice from e-Factura and retype it into 1C. Every invoice. Every client. Every month.

— 03 / WHY NOW

The infrastructure is opening up.

20 MARCH 2026	Moldova’s national Open Banking standard entered into force.
01 JANUARY 2021	Electronic invoices required for taxable public-procurement supplies.

Structured invoices. Consent-based bank access. A foundation for connected accounting.

04 / SOLUTION

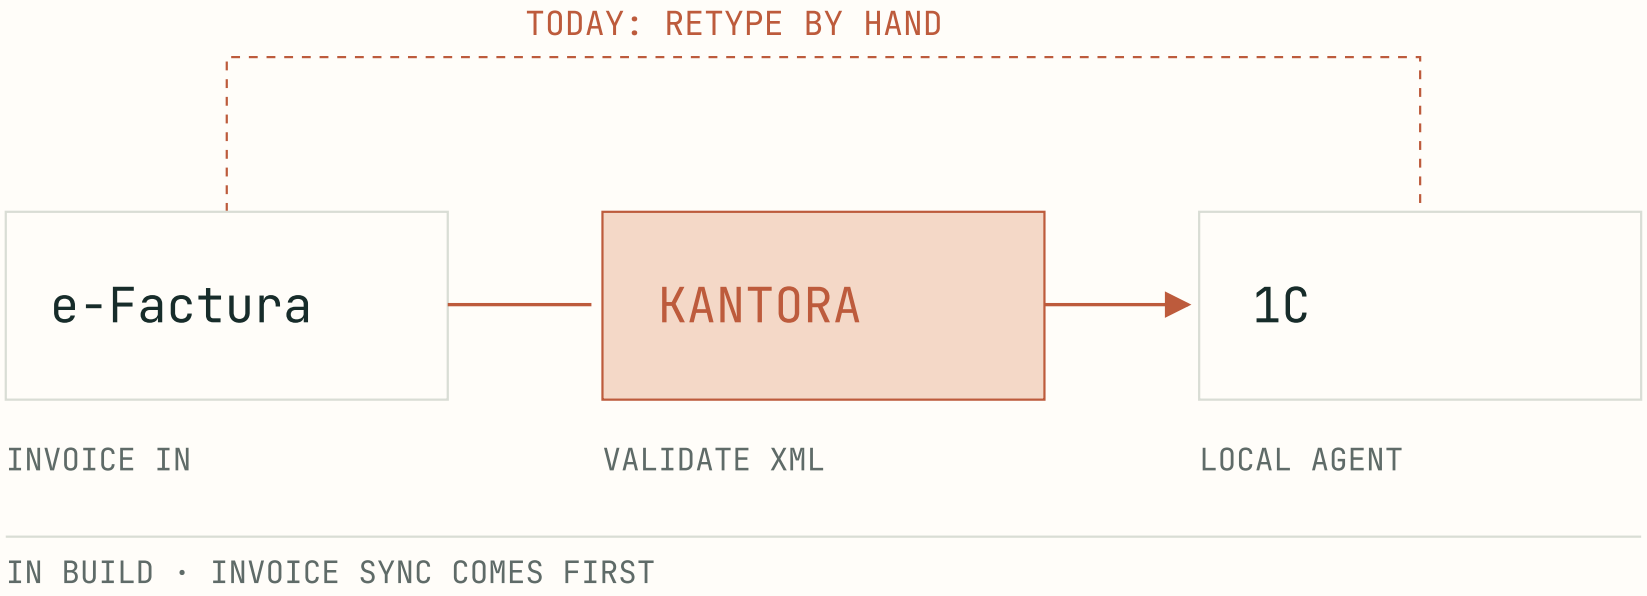
Company health. On your phone.

Our goal: understand your company's financial health in 10 seconds.

One platform to synchronise banking, fiscal services and the accounting ledger.

e-Factura → 1C invoice sync	IN BUILD
Bank sync & reconciliation	NEXT
Cashflow dashboard	NEXT
AI agent over the unified data	PLANNED

Capture. Validate. Sync.



1C is on-premise, so the sync runs as a local agent, and posts documents through the configuration's own logic rather than writing to the database.

The hard leg is the moat.

The ledger is where the integration gets specific.

1C integration is per-install, not a clean public API. Kantora's focus is the local agent and the configuration's own posting logic.

Our defensibility thesis: build depth in the hardest connection.

07 / COMPETITION

Start where the ledger needs attention.

Capability	Sirius	Kantora
Bank sync	Advertised	Next
Dashboard	Advertised	Next
e-Factura	Advertised	In build
1C sync	Not verified	In build
AI layer	Not verified	Planned

Sirius public product page ↗ · Checked 15 September 2026.
“Not verified” does not mean absent. Kantora statuses describe work in progress.

— 08 / MARKET

From an internal tool to a national product.

Agency pilot → Across Moldova

Start with the agency’s clients. Learn from day-to-day accounting work. Then scale into a national product for SME owners and accounting agencies.

Planned rollout.

One agency. A direct route to the workflow.

Jizdan & Partner serves `400 companies`.

We plan to ship internal tooling for the agency's clients first, then expand after the pilot.

Client base of the accounting agency; pilot rollout planned.

MVP in build.

Planned pilot · Internal tooling for Jizdan & Partner and its clients.

Integration research complete · MAIB API, e-Factura API and invoice XML schema specced.

1C integration path chosen · Local agent; native document posting.

Invoice sync first. Intelligence follows.
